

**"phase1\_data.csv"**

## **EDA Final Project Data, Team 9**

### **Description**

The following is a codebook that serves as a data dictionary for all the variables used for Phase 1 of the final EDA project by Team 9. The complete data is presented as a table in the "phase1\_data.csv" file. The primary key for this table is the cause\_name variable. The data has been collected from the World Health Organization (please see the references page in the final report for proper citations).

<b>Variable</b>	<b>Description</b>
cause_name	Each observation is one of the major causes of death from disease around the world. This serves as the primary key.
deaths_from_cause	The total number of deaths recorded for each cause in the year 2019.
proportion_of_total_deaths	The proportion of total deaths attributed to each cause for the year 2019.
